THE SMOKELESS STOVE
Yorkshire
Wood-burning & Multifuel
Central Heating & Roomheating

Dunsley Products are manufactured in Great Britain
How do you choose the stove to meet your requirements? We would like you to choose a Dunsley “Yorkshire” Stove - but, while you're comparing it with other models, may we suggest that you consider the following points?

The Yorkshire Stove is the only multi-fuel stove ever to have met all the U.K. clean-burning tests. It can actually burn cleaner than so-called ‘smokeless’ fuels. (HETAS Approved)

The Yorkshire will burn virtually anything. You can burn wood, coke, anthracite, bituminous coal briquettes, even brown coal and softwoods, even in smoke control areas, there’s no need to change grates or throat plates, as the grate bars are adjustable making them suitable for either wood or other fuels.

Clean combustion gives you a clear view of the fire through the large self-cleaning window.

Burning the smoke as well as the fuel means more heat for less fuel. That means less ash, less refuelling and less hassle. Just one simple control.

YOUR CHOICE

The Yorkshire stove be it for room heating only or an automatic central heating model can be ordered either as a multifuel model or as a woodburning model. The woodburning model is less expensive but can only burn wood.

HOW IT WORKS:

In ordinary stoves, air comes up beneath the fuel, so that smoke (which is tiny particles of unburned fuel), heat and waste gases are thrown from the top of the fuel into the chimney. The Yorkshire is different - air enters above the fuel, sweeping in front of the window, forcing smoke down into the hottest part of the fire and on into a refractory-lined ‘afterburn’ chamber. Highly turbulent air is introduced to the hot smoke, which ignites generating temperatures of up to 1,100°C. The result is not just near-zero smoke emission, but greatly improved efficiency, virtually instant controllability and a truly astonishing swirling flame pattern.

Dunsley Yorkshire - the st
SMOKELESS: The Dunsley Yorkshire Stove Boiler Model, side view showing waterways in blue uses the Downburning system where the smoke (which is tiny particles of unburned fuel) is pulled down through the very hottest part of the fire into an afterburn chamber where it burns away - giving more heat for less fuel and combustion clean enough for even the strictest smokeless zones - it's even cleaner than 'smokeless' fuels. On the boiler model air supply for combustion can be obtained from outside the building for good performance without draughts.

CLEAN & CLEAR: Clean combustion and airwash air supply means a really clear view of the flames.

EASY TO USE: Just one control for the boiler model - turn it up and it goes up, turn it down and it goes down. There are no valves or dampers to adjust.

GRATE BARS: Fitted with long life Chrome Iron multi-fuel riddling grate bars, which has two functions, to adjust the space between the grate bars making them suitable for wood or other fuels. Also agitates the firebed to remove the ash.

FUELS: The Yorkshire is approved to burn the following fuels even in smoke control areas. Dry seasoned wood - Dry peat turves - Peat briquettes - Lignite briquettes “Union brikets” - Wildfire coal briquettes - all authorised smokeless fuels, including Briquettes - Soft cokes and Hard cokes.

The Yorkshire is the only stove officially U.K. approved to burn the above range of fuels in smoke controlled areas.

The Yorkshire has also been approved for long burning periods of upto 8 hours.

The Yorkshire with or without automatic boiler is very suitable for Woodland areas as it will burn soft wood or hard wood continually, even in smoke controlled areas.

Dunsley also has available for boiler model, external air intake which allows combustion air to be taken from outside the building. See accessories on rear page.

Installation instructions and prices are available on request.
Keep your gas/oil costs down. Install a Dunsley Stove with or without boiler. Remember wood is a renewable fuel, it just keeps growing.

Research and development of the Yorkshire Stove’s clean-burning combustion system was partly funded under European Union environmental protection schemes.

The University of Liverpool

Analysis of gas dynamics and physical flow modelling of the Yorkshire Stove’s combustion chamber carried out by the University of Liverpool.

Many stove manufacturers are claiming "Clean Burn". This does not mean they are approved appliances. If you live in a smoke control area you should make sure the stove you install is an officially U.K approved appliance for the fuels you wish to burn.

The Yorkshire Stove
Registered Design No: 4022250 and 402249

Exempted Fireplaces
The Smoke Control Areas (Exempted Fireplaces) Order 1999
The Smoke Control Areas (Exempted Fireplaces) Order 2005

The Dunsley Yorkshire Stoves
Have been approved for use in smoke control areas in the United Kingdom and are exempt from the section 20 of the Clean Air Act 1993 when:
1. Installed, maintained and operated in accordance with the manufacturer’s instructions.
2. No fuel shall be used other than:
Wood-Burning Stove and Wood-Burning Stove with Boiler: (a) untreated dry wood.
Multifuel Stove, and Multifuel Stove with Boiler: (a) untreated dry wood, (b) peat or peat briquettes, (c) Union Coal Briquettes, (d) CPL Wildfire bituminous coal briquettes, or any approved smokeless fuel.

It’s quality that counts
